

ABSTRACT OF THE DISCLOSURE

In an information processing apparatus connectable to a terminal through a network, a terminal type of the terminal is specified based on a first request
5 requesting Web information, said first request sent from the terminal through the network, and reference Web information is generated so as to include reference path created by adding terminal type information showing the specified terminal type to a path indicated in the first request for accessing
10 the Web information and to allow the terminal to automatically accesses to the reference path. Then, the reference Web information is sent to the terminal as a response with respect to the first request, and a second request for requesting the Web information specified by the
15 reference path is received.
